

SCENARIO 2: MYNETWORK

The **MyNetwork** scenario presents a personalised Social Networking approach to diverse and fragmented networks that exist along each other. In 2025, teachers are able to manage their networks through a single application and be in control of their own data. A new application, **MyNetwork** enables teachers to create multiple profiles through a single log-on, whereby they are able to **manage their personal data, its visibility and their list of contacts**.

Teachers are able to link to different applications without losing too much time to learn each and every one of them. A **complex identity management system** allows to **change from one profile to another at the click of a button**.

For the school profile, the teacher enters into a **secure environment**, which is compliant with the school's policies. Teachers can connect also with teachers outside Europe to share ideas and resources. As an application which **runs from the cloud**, log on happens from anywhere, at anytime. Students also have their own profile on MyNetwork, and there is no need for them to compromise their personal freedom because they are in control of what their teacher are able to see: their school profile. The teacher can observe how active the students are and sees that they **are more involved in**

active learning and take more initiative in using technology for learning.
